Distributed Learning Training anytime anywhere

DELIVER

high quality, individually tailored, and cost effective

TRAINING

and education to Soldiers and leaders

ANYTIME, ANYWHERE

through an integrated network of technological capabilities and processes

TRADOC ⊕ **ATSC** ⊕ **DLS** ⊕ **ARNG** ⊕ **USARC**

A Global Army Network Training Enterprise

Enable Army Training Anytime, Anywhere

“Distributed Learning gives us the best of the best, because it links virtual with live training, and provides an important means of taking training and education to Soldiers and units anytime, anywhere.”

Commanding General TRADOC

There is no question that the US is a nation at war, with service members deployed around the world. The Global War on Terrorism obviously impacts how the US Army develops and conducts its training. It was necessary for Army training to undergo profound changes and the use of distributed Learning (dL) is key to this undertaking.

Distributed Learning leverages the power of information and communication technologies to deliver training and education. Through the use of common standards, dL provides tailored learning to meet individual needs.

Distributed Learning supports the Army's training and education goals and objectives. dL is an integral component of the three pillars of the Army's training and education system: institutional, operational, and self-development training.

Supporting an Army at War

- Life long learning
- Supports ARFORGEN model
- Reduces cost per trained Soldier
- Increases readiness
- Increases effectiveness in training and education
- Improves access and opportunity
- Provides greater stability for Soldier families

Today, the Army improves training, enhances force readiness, and supports Army transformation by exploiting current and emerging dL technologies and methods. Consequently, Army personnel have access to quality training and education anytime, anywhere.

Distributed Learning continues to grow and evolve as new technologies and concepts emerge, enhancing our capability to produce better-trained Soldiers and improve readiness. As with all facets of Army transformation, training supports the mobility and adaptability of the Future Force.

Access the Army training portal via the AKO to register and take dL training, manage training records, schedule and commit training resources, and view transcripts and career map.
